

# TOP WAYS TO HELP YOU SAVE ELECTRICITY AT HOME

Save 50% or more on your electricity. The more electricity you save, the more money you save. It's that simple. And with rising electricity tariffs, the savings will only increase.

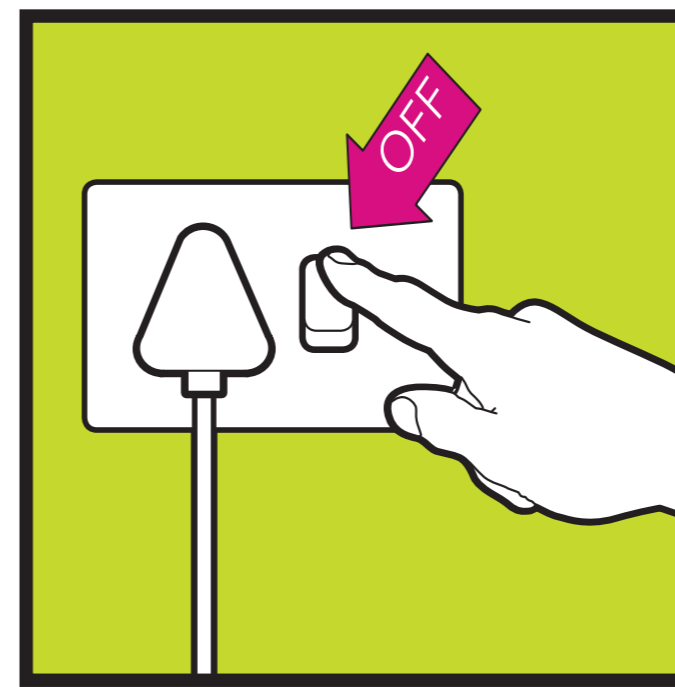

## Turn

Turn down your geyser temperature to 60°C. This will save you up to 5% on your electricity bill.

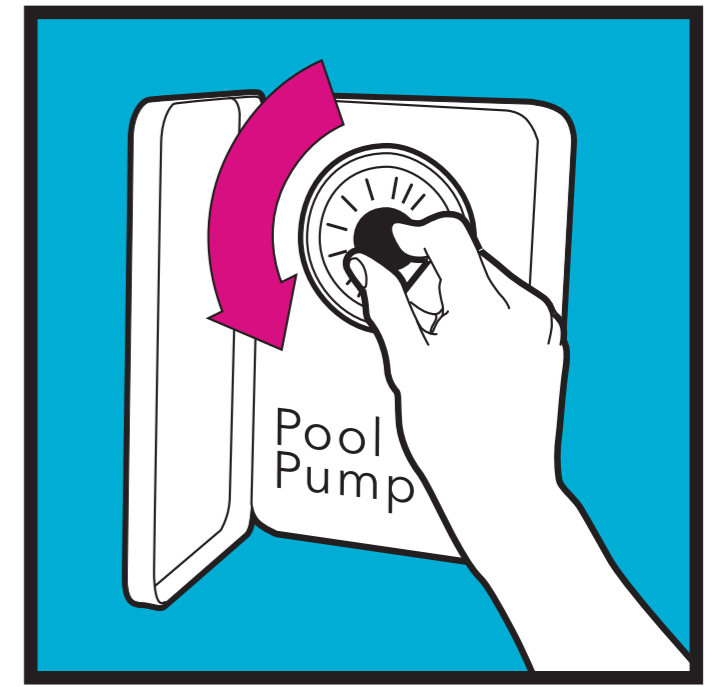

## Flip

Rather take a shower. You'll save up to 80% in water and use 5 times less electricity than heating a bath of water.

## Press

Switch off appliances at the wall and pull out chargers, leaving them in standby mode could cost you up to 6% more electricity.

## Set

Set your pool pump to run fewer hours. At 10 hours a day, it uses about 11% of your electricity. For winter, 2 - 3 hours is enough for most pools.

## Dry

Dry laundry using sunshine whenever possible, not the tumble dryer. For rainy days, use drying racks indoors.

## Twist

Replace regular bulbs with energy-saving ones that use 6 times less electricity.

## Fit

Install an energy and water efficient showerhead. These use up to 40% less hot water and will save you money on your electricity bill.

## Place

Bring food to a boil then place hot pot in an insulation cooker. The retained heat slow-cooks, saving up to 60% on energy.

## Seal

Seal or block gaps around windows and doors to keep heat from escaping and cold drafts from breezing in.

## Light

Light a fire instead of using electric heating. Fireplaces retain heat and warm spaces effectively, keeping your cost down and the warmth up.

## Cover

Fit your geyser with a geyser blanket. It prevents heat loss, reducing the cost of electricity needed to keep water hot.

## Wrap

Insulate your hot water pipes. This prevents heat loss, reducing the cost of electricity needed to keep water hot.

## Switch

Move to using gas for cooking. Gas is more efficient than electricity and you have the added bonus of still being able to cook during power outages.

## Lay

Insulate your ceiling. It slows heat loss, making your home up to 5°C warmer in winter, saving up to 16% of your electricity annually.

## Install

Invest in a solar water heater. It uses the sun to heat up your water, saving you 25% or more on your electricity bill.

## Generate

Install a solar photovoltaic system. These generate electricity from the sun's energy.
